

Chemistry F325, Organic Chemistry II Laboratory, 1.0 Credits  
Reichardt 245

: Lecture component of Chem 325, Organic Chemistry II.  
: Chem 321 Organic Chemistry I (includes Laboratory)

F01	34386	Thursday	11:30	2:30	TBA
F02	34387	Thursday	2:45	5:45	TBA
F03	34388	Thursday	6:00	9:00	TBA

Thomas Green, Professor of Chemistry

Reichardt 174, Phone: Home 907-452-6370 Cell 907-744-2726 [Email: tkgreen@alaska.edu](mailto:tkgreen@alaska.edu)  
Office

Learn the following practical aspects of organic synthesis.

1. Common safety procedures.
  2. Reaction methods
  3. Isolation Procedures
  4. Purification techniques
  5. Spectroscopic and chromatographic analyses
  6. Introduction to computational methods in chemistry.
- 
1. Know the hazards associated with common chemicals, especially those encountered in the experiments.
  2. Know how to safely assemble reaction systems using glassware commonly employed in the organic laboratory. These methods include reflux, heating and cooling of reactions, and addition of reagents.
  3. Know how to isolate and purify organic products using methods such as extraction, filtration,  
cr

During lab, you should enter the following,

6. Data and observations. Record actual amounts (volumes or mass) used for each reagent. Record physical constants such as melting point range of the product. If you ran a TLC plate, sketch plate in the notes

see Canvas for specific Experimental Procedures and Report Forms.

No Lab	Jan 13. 20	No Lab	--
HW 1: NMR of Unknowns (30)	Jan 27	<sup>13</sup> C, <sup>1</sup> H NMR, IR Structure Determination	13
HW 2: Mass Spectrometry (30)	Feb 3	Structure Determination, Fragmentation of Functional Groups	12
Exp 1: Solvent extraction of Natural Product (50)	Feb 10	Mass Spectrometry; Solvent Extraction	12
Exp 2: Diels-Alder Reaction (50)	Feb 17	Reflux, NMR Coupling Constants, Modeling	15

Exp 3a: Iodination of Vanillin

Students should keep up-to-regularly checking this website:
